Remote Desktop allows a user to access their University desktop computer from off campus. Before proceeding with these instructions please make sure that your University desktop is configured to allow a remote connection. Also, users must be connected to the campus network through VPN on their home device before establishing a successful remote desktop connection. For instructions on how to configure your campus computer and connect to VPN visit the Operating System Tutorials section of the IT Website.

1. Click **Start> All Programs> Accessories> Remote Desktop Connection**

2. Type the full computer name of your University desktop computer in the space provided.
3. You will then be prompted for your DOMAIN\IslandID and password. Type TAMUCC\ your IslandID.

4. If a successful connection is made you will see the screen below. Click OK to begin navigating your University workstation.
