1. Once you have verified that you are successfully connected to a wireless network, connect to VPN. For instructions on how to setup a VPN connection, visit the Operating System Tutorials section of the IT website.

2. Once you have verified that you are successfully connected to VPN, click the Finder icon on the far left-hand side of your dock.

3. Click Applications, located on the left in the sidebar.

5. Type the full computer name of the device you want to remote into and click **Connect**. For instructions on how to find your computer name, visit the **Operating System Tutorials** section of the IT website.

6. In the space marked **User name**, type **TAMUCC\IslandID** (your own IslandID; e.g. jdoe) and then type your password in the space provided. Your computer name will automatically populate in the **Domain** field.

7. Click **OK**
8. A dialog box will pop up stating that “The certificate is not from a trusted certification authority” and ask if you want to connect anyway. Click Connect.

9. Congratulations! You will then see the initial login screen of the device that you are remoteded into.
